Loading... Greatest Integer Function

The largest integer that is less than 2.7 is 2. So $\lfloor 2.7 \rfloor = 2$. If we examine a number line with the integers and -1.3 plotted on it, we see

Using the greatest integer function on a graphing calculator.

Related LCM Calculator | Factor Calculator. What is the Greatest Common Factor (GCF)? In mathematics, the greatest common factor (GCF), also known as the greatest common divisor, of two (or more) non-zero integers a and b, is the largest positive integer by which both integers can be divided.

Actual Graph • If copying the graph from your calculator, be sure to indicate the open and closed circles on the ends of the line segments. Also, look carefully at the scale locations of the segments if you are transferring the graph onto a sheet of graph paper.

"Graphing greatest integer function" is the stuff which is needed to the children who study high school math. The Greatest-Integer Function is denoted by $y = [x]$ For all real values of "x", the greatest-integer function returns the largest integer less than or equal to "x".

This video shows how to graph the greatest integer function using a TI-84 Plus calculator.

Calculator Use. Use this calculator for adding and subtracting integers. Positive and negative whole numbers are integers. The calculator shows the work for the math and shows you when to change the sign for subtracting negative numbers.

Mathematica » The #1 tool for creating Demonstrations and anything technical. Wolfram|Alpha » Explore anything with the first computational knowledge engine.

The greatest integer function is represented/denoted by $[x]$, for any real function. The function rounds -off the real number down to the integer less than the number. The function rounds -off the real number down to the integer less than the number.
