Mechanical ventilation can help address both sides of the equation. Muscle activity in the sedated patient is lower, Useful, although indirect indices of whether O<sub>2</sub> delivery is and reduced further if the patient is pharmacologically meeting O<sub>2</sub> demand are a raised arterial lactate (suggesting paralysed).

Ventilation handbook Respiratory problems frequently precipitate admission to hospital. The most seriously ill need advanced respiratory support and this is the commonest reason for admission to intensive care. An understanding of respiratory failure and the principles of non-invasive and invasive ventilation is thus essential for those working in this area.
